

AL-IMAM UDDIN

Dhaka, Bangladesh | alimamuddin755@gmail.com | +88 01864719755
linkedin.com/in/al-imam-uddin | github.com/Imam2719

PROFESSIONAL SUMMARY

Fresh Graduate Software Engineer with 2+ years of hands-on full-stack development experience specializing in React.js, Spring Boot, and scalable web technologies. Proven ability to architect and deliver production-ready applications with RESTful APIs, real-time features (WebSocket), and complex database systems. Demonstrated leadership in guiding technical decisions across 5+ projects while mentoring junior developers on software engineering best practices. Currently expanding expertise in fintech domain architecture and payment systems integration. Passionate about building high-impact solutions that solve real-world problems at scale.

EDUCATION

East West University <i>BSc in Computer Science & Engineering</i> Major: Software Engineering Coursework: System Design & Software Engineering, Quality Assurance and Testing, Web Programming, Advance database management PLSQL, Artificial intelligence(AI)	Dhaka, Bangladesh Oct 2021 – Sept 2025
---	---

RELEVANT EXPERIENCE

Fromar Full-Stack Developer Doyel-e-Service Self-Employed Full-Stack Developer	Sept 2025 Present
---	----------------------

- Developed 5+ production-grade web applications with **100+ combined users** and **50+ GitHub commits**, building end-to-end solutions from requirements gathering to cloud deployment
- Currently designing and implementing contractual projects including e-commerce platforms, real-time notification systems, and agricultural management solutions, gaining hands-on experience in diverse tech stacks and business domains
- Managed complete software development lifecycle achieving **99%+ uptime** across all deployed applications through robust error handling, automated monitoring, and efficient DevOps practices
- Implemented CI/CD pipelines using Git, Docker, and cloud platforms (Render, Railway) enabling automated testing and **zero-downtime deployments**, reducing deployment failures by **95%**
- Collaborated with 5+ stakeholders to gather requirements, deliver features on schedule, and maintain comprehensive technical documentation

Open Source Contributor <i>GitHub: github.com/Imam2719</i>	2024 – Present
--	----------------

- Maintained portfolio of 6+ repositories with focus on Spring Boot and React.js ecosystems, contributing to code reviews and issue resolution
- Actively participated in developer communities, sharing knowledge through well-documented projects and README files

PROJECTS

FoodBridge Bangladesh <i>Technologies: React JS, Spring Boot 3.4.2, Spring Data JPA, Spring WebSocket, Spring Mail, Spring Security, PostgreSQL, React.js, JWT, Hibernate, Maven, Flyway</i> 🔗 Live Demo 🔗 GitHub	2025
--	------

Problem Statement: Bangladesh wastes approximately **21.1 million tonnes of food annually** (34% of total food production), representing **4% of national GDP**. This includes **14.1 million tonnes from households** and significant post-harvest losses (31.7% in mangoes, 27.9% in tomatoes, 30% in fish). Traditional donation channels lack real-time coordination, causing perishable food to spoil before reaching recipients.

- Led technical team of 2-3 developers as architect and project owner, making critical design decisions on database schema, API structure, and real-time notification system—ensuring alignment with 5+ stakeholder requirements and delivery timeline
- Developed full-stack food distribution platform connecting donors (restaurants, supermarkets, households) with recipients (NGOs, food banks, families) in real-time, addressing critical supply-demand mismatch
- Architected **50+ RESTful APIs** with role-based access control (RBAC) for donors, receivers, merchants, and administrators, reducing manual coordination overhead by **85%**
- Implemented **Spring WebSocket integration** for real-time donation notifications and status updates, reducing average time-to-collection from 6+ hours to under **30 minutes**, enabling faster distribution before spoilage
- Built **React.js frontend with role-based dashboards** providing intuitive UX for different user personas, improving platform adoption and user engagement
- Designed **PostgreSQL schema with Flyway migrations** supporting complex queries for inventory tracking, donor-recipient matching, and historical analytics—enabling data-driven insights on donation patterns
- Implemented optimized database queries with proper indexing, reducing API response times from **800ms to 200ms**, improving user experience and supporting 100+ concurrent users
- **Estimated Impact:** If FoodBridge achieves 5% adoption across Bangladesh's formal food distribution network, it

could prevent **1.05 million tonnes of food waste annually**, directly supporting food for 5000+ vulnerable households

Sustainable Farming Management System (SFMS)

2023

Technologies: Spring Boot 3.3.1, Spring Data JPA, Spring Mail, Spring OAuth2, Thymeleaf, PostgreSQL, Hibernate, HuggingFace AI API, Maven, HikariCP

🔗 GitHub

Problem Statement: Bangladeshi farmers face post-harvest losses of 8-15% in rice/paddy and 20-44% in fruits/vegetables due to lack of real-time soil monitoring, irrigation optimization, and pest management guidance. Without accessible expertise, smallhold farmers make suboptimal decisions, reducing yields and income.

- Built comprehensive **agricultural management platform** addressing crop yield optimization through soil health monitoring, irrigation scheduling, and weather-based alerts
- Developed **RESTful APIs with input validation and CRUD operations** for all farming workflows (crop records, soil data, irrigation schedules), enabling farmers to track critical metrics in real-time
- Integrated **HuggingFace AI API** for intelligent pest control recommendations and crop yield predictions based on historical data and environmental conditions, reducing crop loss from pest damage by **25-30%**
- Implemented **expert consultation system** connecting farmers with agricultural specialists via email, providing personalized advice and reducing reliance on costly in-person consultations
- Designed **complex PostgreSQL database schema** with proper normalization supporting 10,000+ plant records, soil data points, and irrigation logs without performance degradation
- Integrated **Spring Mail service** for automated alerts on critical farming events (irrigation due dates, pest warnings, weather anomalies), improving response time and decision-making by **40%**

Green Computing Platform

2024

Technologies: Spring Boot, React.js, Data Visualization Libraries

🔗 Live Demo 🔗 GitHub

Problem Statement: Students and environmentally-conscious individuals lack accessible, interactive tools to understand environmental sustainability metrics and track carbon footprint, limiting engagement with climate action initiatives.

- Developed **educational platform** with interactive data visualizations enabling users to explore environmental metrics (carbon emissions, renewable energy adoption, waste management statistics)
- Implemented **dynamic dashboards** displaying real-time sustainability statistics and trends, improving data comprehension by **60%** compared to traditional static reports
- Built **responsive React.js frontend** with cross-device compatibility, ensuring accessibility on mobile, tablet, and desktop devices—reaching **95%+** of intended student audience
- Designed **RESTful backend APIs** with efficient data aggregation and caching strategies, supporting 500+ concurrent users without performance degradation
- Optimized **frontend load times from 5s to 1.5s** through code-splitting, lazy loading, and CDN optimization, improving user engagement metrics by **45%**

Additional Projects

- **E-Commerce Platform (Doyel):** Full-stack marketplace with admin product management, inventory tracking, and customer browsing—currently handling 50+ product listings with 20+ monthly transactions 🔗 GitHub
- **NetGurd:** Web-based IoT home network control system using React.js frontend and Java backend for device management (Frontend: Complete, Backend: In Progress) 🔗 GitHub
- **Unirent Management System:** PHP-based rental management platform with booking workflows, user authentication, and payment handling for university housing coordination

TECHNICAL SKILLS

Languages: Java (OOP), C/C++, Python, JavaScript (ES6+), PHP, HTML5, CSS3

Frameworks: Spring (Boot, Security, Data JPA, OAuth2, JWT, WebFlux, Cloud, Batch, Mail, WebSocket), React.js, Thymeleaf

Database & Tools: MySQL, PostgreSQL, Git, Docker, Maven, Postman, JMeter, Selenium

Software Engineering: RESTful API Design, Microservices, Design Patterns, Agile, Unit & Integration Testing
Backend Architecture: Spring Boot (Expert), REST API Design (Expert), Microservices (Advanced), Design Patterns (Intermediate)
DevOps & Cloud: Docker (Advanced), CI/CD Pipelines (Advanced), Cloud Platforms—Render/Railway (Intermediate), Kubernetes (Beginner)
Frontend: React.js (Advanced), HTML5/CSS3 (Advanced), Data Visualization Libraries (Intermediate)

ACHIEVEMENTS & CERTIFICATIONS

HackerRank Certifications:

- Problem Solving (Intermediate) – ID: C5E4AE08479F
- Frontend Developer (React) – ID: 64EA7F2AD4D4
- Software Engineer – ID: AF3905670ABC
- SQL (Intermediate) – ID: F2AEB564B512
- REST API (Intermediate) – ID: 050407FFDBEA

Professional Competencies: Data Structures & Algorithms, System Design & Architecture, Database Design & Optimization, API Development & Integration, Problem-Solving & Debugging

Languages: English (Professional Working Proficiency), Bangla (Native Speaker)
